## Cost Models for Parallel Programming on Shared Memory Architectures

By Bandettini, Alberto

Condition: New. Publisher/Verlag: Edizioni Accademiche Italiane | A Methodological and Structured Approach to Performance Prediction | Currently, multiprocessors and multi-cores are very complex and heterogeneous systems with parallelism exploited at processes level. The trend seems that the number of cores per chip is expected to double every two years - the idea is to substitute few complex and power-consuming CPUs with many smaller and simpler CPUs that can deliver better performance per watt. Such architectures can be exploited efficiently provided that applications are able to do it. In order to do so a methodological and structured approach is needed to keep low the complexity of the resolution. On one hand, structured parallel programming is used in order to create parallel applications independent of the underline architecture. On the other hand, a cost model in association with an abstract architecture is needed from the performance prediction point of view. This book is a contribution on that approach enhancing the cost models for shared memory architectures and its accuracy with particular care to parallel application constraints. | Format: Paperback | Language/Sprache: english | 152 pp.

### Reviews

*Extensive guideline! Its this sort of excellent read. it had been writtern quite properly and helpful. You can expect to like just how the writer create this book.*

-- **Mr. Gustave Gerhold**

*This book will never be straightforward to start on reading through but quite enjoyable to learn. Better then never, though i am quite late in start reading this one. Your lifestyle span will probably be convert once you complete reading this publication.*

-- **Dr. Kadin Hane DVM**
